

OriginIoT 3G

Integrated Cellular IoT System

EVERYTHING you need to develop your **THING**

- 3G Pentaband
- Low power mode
- Connects to 100+ types of sensors
- **Integrated GPS/GNSS functionality**
- **No embedded code or RF engineering**

Worldwide coverage

Support for all 3G and 2G bands establishes worldwide coverage and rock-solid communication in one product.

Harmonious signals

Exceptional GPS/GNSS functionalities integrated with LTE CAT M1 technology deliver fast, sensitive, accurate performance.

Multiple interfaces

Interface support for 100+ different sensors, and a board to board connector.

Astounding TTM

Minimized development resources, less certification expenses, and no design risks for antenna-GPS receiver integration stages the quickest way to market.

OriginSmart™ software

Proprietary embedded software for cloud based programming and system analytics: data collection, control and management.

Power efficiency

Power saving and fast wakeup mechanisms with suspend and resume in ~1 sec.

Add-ons

Add-ons for power efficiency include a battery connection, power management system and wireless charging, while an optional MCU and memory may be leveraged for your own unique app..

Compatible family

All miniaturized OriginIoT devices have the same, pin connections, SW tools, AT commands and cloud platform, facilitating smooth technology evolution transitions.
